ABSTRACT

This report on transiency and stability in the Los Angeles Unified School District continues a series that has been augmented annually since 1968-69. Transiency refers to the adjusted numbers of entrants and leavers, expressed as a percentage (rate); stability refers to the student population that has remained in the school all year, expressed as a percentage (rate) of the starting enrollment. Information on the number of students who entered and left each month was gathered from all regular and magnet schools. Rankings were computed for elementary, secondary, and magnet schools, by administrative region and division, with a district summary. Transiency rates reported in this study cannot be directly compared to previous years because a new formula used to compute transiency for 1982-83 was further refined for this study. Also, this report introduces a new formula to compute the stability rate, so rates reported cannot be directly compared to previous years' rates. Overall, the stability rate declined from 1978-79 to 1980-81, from 76.6 percent to 74.1 percent, with noteworthy improvements over the next 2 years. The overall transiency rate for 1983-84, 40.8 percent, can be used as a baseline for comparing future rates. Historical data are reported for 1968-1978 and 1978-1984. Statistical data are included on seven tables. (FMW)

ABSTRACT

This transiency and stability report for the Los Angeles Unified School District, 1983-84, continues the series that has been augmented annually for over a decade.

Transiency refers to the adjusted number of entrants and leavers, and is expressed as a percentage ("rate"). Stability refers to the student population that has remained in the school all year, and is expressed as a percentage ("rate") of the starting enrollment.

Please note that in this and last year's report the transiency formula is new. Also, this report uses a refined stability formula. The rates shown, therefore, cannot be directly compared with previous years' rates.

Information has again been gathered from all regular and magnet schools relating to the number of students who entered and left each month. Rankings were computed for elementary, secondary, and magnet schools, by administrative region and division, with a district summary.

Fluctuations in annual rates may reflect more than ordinary entering and leaving. For instance, in recent years, attendance patterns may have changed because of magnet programs, busing, or reconfigured grades. As noted in Findings, overall stability rates have risen in the last several years, after a low in 1980-81:

School Year	Stability Rate
1978-79	76.64%
1979-80	75.46%
1980-81	74.11%
1981-82	74.98%
1982-83	76.68%

The 1983-84 stability rate of 78.2% marks a new baseline for future comparisons.

BACKGROUND

Since 1968-69, the Research and Evaluation Branch has published an annual report entitled "Transiency Rates in Los Angeles City Schools," which presents student transiency activity in relation to school enrollment. The resulting transiency percentage of the school's average enrollment at times exceeded 100% because some students were counted twice, as both entrants and leavers. This duplication was corrected in a subsequent report, and later improvements included stability rates with transiency rates in the 1974-75 report.

In the 1983-84 report, as last year, magnet programs include schools and centers as well as alternative schools. Year-round schools are again listed with the regular schools.

Not included in this survey are data for continuation and opportunity high schools, community adult schools, skills centers, and schools for the handicapped.

Since transiency and stability are not reciprocal concepts, the sum of their rates is not required to equal 100%. Each concept is computed separately, although some counts of students are common to both formulas.

It is important to note that in this report the new formula for computing transiency has been applied for the second year. To refine the transiency concept, all enterers (E) and leavers (L) for the 1st school month have been eliminated from consideration. Statistics are based on the 2nd through the 10th school month. The categories of E1, L1, and L7 are no longer used in calculations.

For the first time, a refined stability formula has also been used. Leavers in the 1st school month are not counted, and the categories of L1 and L7 are no longer used.

The definitions and explanations that follow will clarify these new approaches to studying transiency and stability.

DEFINITIONS

For this report, these definitions apply:

Transiency refers to the adjusted number of entrants and leavers for the year. It is expressed as a percentage ("rate") of 1st plus 6th school-month enrollments averaged. See Formulas.

Stability approximates the student population that has remained in the school all year. It is computed by subtracting all school-year leavers from the starting enrollment, and is expressed as a percentage ("rate") of the starting enrollment. See Formulas.

Entrants in this report are students entering during the school year, with the exceptions of those returning to the same school at the beginning of the school year (E1).

Categories of entering students included in this survey are:

E2 entering from another school within LAUSD

E3 entering from another public school outside LAUSD

E4 entering from a nonpublic school in California

E7 enrolling for the first time (generally kindergarten or 1st grade)

Leavers in this study are students leaving any time during the school year, except those graduating (L7) and those leaving one grade or program to enter another in the same school (L1).

Categories of leaving students included in this report are:

L2 leaving one LAUSD school for another

L3 leaving for another public school outside LAUSD

L4 leaving for a nonpublic school in California

L8 leaving without giving the school enough information about destination or reasons; thus, categorized as unknown or dropped

Schools of choice or magnet programs are part of the district's voluntary integration program. Magnet schools and centers (which include four alternative schools) are open to all LAUSD students, grades K-12. A program may include the entire student body or selected grades. Each program emphasizes a particular field of interest such as science, language, multicultural studies, performing and fine arts, business, and the basics of reading, writing, and mathematics. Gifted and high-achieving students study in programs that emphasize accelerated learning and creativity through expanded academic experiences.

Rate refers to the percentage term calculated by the formulas for stability and transiency. A school with a high stability rate and a low transiency rate has excellent holding power.

Rank refers to ordering the transiency and stability rates for schools listed in Tables 2 through 5, with the highest rate being assigned rank 1. Thus, rank 1 for stability indicates holding strength, but rank 1 for transiency indicates the highest student mobility. Each table contains unique rankings within its pattern that cannot be directly compared to other years' rankings. Table 1 gives region and division rankings.

FORMULAS

The formulas for stability and transiency are explained as follows:

Symbols Used

E total number of entrants for the school year: this includes all E2, E3, E4, and E7 students for school months 2-10; excludes all Es in month 1; excludes all E1 students for months 2-10.

L adjusted number of leavers for the school year: this includes all L2, L3, L4, and L8 students for school months 2-10; excludes all Ls in month 1; excludes all L1s for months 2-10.

M1 1st school-month enrollment

M6 6th school-month enrollment

S school-year stability rate

T school-year transiency rate

Formula for Stability

Stability equals 1st school-month enrollment less adjusted number of leavers divided by 1st school-month enrollment, times 100 -- yielding a percentage term, the stability rate.

$$S = \frac{M1 - L}{M1} \times 100$$

Formula for Transiency

Transiency equals number of entrants plus adjusted number of leavers divided by sum of enrollment for 1st and 6th school months divided by 2, times 100 -- yielding a percentage term, the transiency rate.

$$T = \frac{E + L}{(M1 + M6)/2} \times 100$$

Noteworthy changes in the new formulas include these:

- All Es and Ls in school month 1 are excluded from consideration because they are already present in the M1 total.
- The concept of excluding E2s from the 1st month's total ("SE2" in the 1981-82 formula) no longer enters into the calculation of transiency since no Es and Ls are considered during the 1st school month except as baseline enrollment.
- The average of the 2 peak months for enrollment is used rather than the sum of the 2 (in older formulas). As soon as programming allows, the formula will be further refined to incorporate the mean of enrollment for all 10 school months as the denominator.

FINDINGS

Overview results for the district appear in Table 1, and results for each school are presented in Tables 2-5. Rates for transiency and stability since 1968 are shown in Tables 6-7. The 1982-83 figures should not be directly compared with earlier figures because of the formula change starting that school year.

There was a small decline in the stability factor from 1978-79 to 19[illegible]-81, from 76.6% to 74.1% with improvements the next 2 years. The 1983-84 stability rate of 78.2% marks a new baseline for future comparisons. (Table 7)

The overall transiency rate for 1983-84 is 40.8% by the new formula, not directly comparable with transiency rates before 1982-83.

Junior High	73	116,257	117,700	22,298	24,113	79.26	39.67
Senior High	49	115,880	111,211	16,391	29,256	74.75	40.20
District	614	534,413	538,954	102,115	116,785	78.15	40.79

Note. Magnets are also called schools of choice. Table based on monthly school reports to Budget Division, Pupil Statistics and Reports Section, for the first 4 years shown, as summarized in earlier publications in this same series (using the formula first applied in 1978-79). For 1982-83 and 1983-84, a new transiency formula was applied, and for 1983-84 a new stability formula was introduced. These distinctions serve as warnings not to directly compare rates derived from different formulas.
